NHS Recommended Childhood Vaccination Schedule

As of September 2018 the NHS childhood vaccination schedule, specifically from newborn to preschool-aged children, consists of:

- Diphtheria, tetanus, whooping cough, polio, Haemophilus influenza type b, and hepatitis B (DTaP/IPV/Hib also termed a primary immunisation courses): multiple-antigen vaccine administered at 8, 12 and 16 weeks of age.
- Pneumococcal (PCV): vaccine administered at 8 weeks, 16 weeks and 12 months of age.
- Meningitis B: vaccine administered at 8 weeks, 16 weeks and 12 months of age.
- Rotavirus: vaccine administered at 8 and 12 weeks of age.
- Haemophilus influenza type b and meningitis C: administered as a combined-antigen vaccine at 12 months of age.
- Measles, mumps and rubella: administered as a triple-antigen vaccine at 12 months of age, and again when the child is 3 years and 4 months old.
- Diphtheria, tetanus, whooping cough and polio (DTaP/IPV or colloquially termed the ‘pre-school booster’): administered as a multiple-antigen vaccine at 3 years and 4 months old.
